Globulin IV alpha subunit gamma chain, seed - cucurbit (fragment)
NyAlternate names: 11S globulin alpha subunit gamma chain
C;Species: Cucurbita sp. (cucurbit)
C;Species: Cucurbita sp. (cucurbit)
C;Date: 21-Nov-1993 #sequence_revision 08-Nov-1996 #text_change 08-Nov-1996
C;Accession: S09478
R;Ohmiya, M.; Hara, I. Matsubara, H.
Plant Cell Physiol. 21, 157-167, 1980
A;Thile: Pumpkin (Cucurbita sp.) seed globulin IV. Terminal sequences of the acidic and PA;Reference number: S09066
A;Accession: S09478
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0

C. Accession: PT0721
B. FED. Med. 174, 115-124, 1991
A. FILLE: Unactional sequences of fetal T cell receptor beta chains have few N regions.
A. Reference number: PT0721
A. Accession: PT0721
A. Accession: PT0721
A. Accession: PT0721
A. Molecule type: DNA
A. Residues: 1-4 < FEE>
A. Experimental source: newborn thymus, strain BALB/C
C. Keywords: T-cell receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  J. Exp. Med. 174, 115-124, 1991
A/Title: Junctional sequences of fetal T cell receptor beta chains have few N regions.

- FUNCTION: ACYL-PROTEIN SYNTHETASE ACTIVATES TETRADECANOIC ACID.

- FUNCTION: ACYL-PROTEIN SYNTHETASE ACTIVATES TETRADECANOIC ACID.

IT IS A COMPONENT OF THE PATTY ACID REDUCTASE COMPLEX RESPONSIBLE FOR CONVERTING TETRADECANOIC ACID TO THE ALDEHYDE WHICH SERVES AS SUBSTRATE IN THE LUCIFERASE-CATALYZED REACTION.

- CATALYTIC ACTIVITY: ATP + an acid + protein = AMP + diphosphate + an acyl-protein thiolester.

- PATHWAY: Bioluminescent fatty acid reduction system; second step.

Inhibitory neuropeptides, Antho-KAamide and Antho-RIamide.";
Proc. R. Soc. Lond. Biol. Sci. 253:188-1881(193).
I-FUNCTION: Inhibits spontaneous contractions in several muscle groups. May be involved in the expansion phase of feeding behaviour in sea anemones.
I-SUBCELULAR LOCATION: Secreted.
I-TISSUE SPECIFICITY: Neuron specific.
PIR: JO1273; JO1273.
MOD_RES I I. L-3-PHENYLLACTYL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

GENERAL INFORMATION:
APPLICANT: Biolab Sanus Farmaceutica Ltda.; et all
APPLICANT: Biolab Sanus Farmaceutica Ltda.; et all
APPLICANT: Biolab Sanus Farmaceutica Compositions Preparation Of Peptides,
TITLE OF INVENTION: Paramaceutical Compositions Preparation Of Peptides,
TITLE DE INVENTION: Secreted by The Snake Venom Glands, Particulary Of Bothrops jara
TITLE OF INVENTION: And Products Associated, Thereof. For Development Of Aplications
FILE REFERENCE: PIO205449-3
CURRENT APPLICATION NUMBER: PCT/BR03/00192A
CURRENT APPLICATION NUMBER: PCT/BR03/00192A
CURRENT PILING DATE: 2003-12-09
PRIOR FILING DATE: 2003-12-09
NUMBER OF SEQ ID NOS: 594
SEQ ID NO 246
LENGTH: 7
         Vasopeptidases Inhibitors, Evasins, Their Analogues, Derivatives
And Products Associated, Thereof. For Development Of Aplications
And Use In Chronic-Degenerative Diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         APPLICANT: Biolab Sanus Farmaceutica Ltda.; et all TITLE OF INVENTION: Pharmaceutical Compositions Preparation Of Peptides, TITLE OF INVENTION: Secreted by The Snake Venom Glands, Particulary Of Bothrops jara TITLE OF INVENTION: Vasopeptidases Inhibitors, Evasins, Their Analogues, Derivatives TITLE OF INVENTION: And Products Associated, Thereof. GENERAL INFORMATION:

APPLICANT: Biolab Sanus Farmaceutica Ltda.; et all

APPLICANT: Biolab Sanus Farmaceutical Compositions Preparation Of Peptides,

ITILE OF INVENTION: Pharmaceutical Compositions Preparation Of Peptides,

ITILE OF INVENTION: Vasopeptidases Inhibitors, Evasins, Their Analogues, Derivatives;

ITILE OF INVENTION: And Products Associated, Thereof. For Development Of Aplications;

ITILE OF INVENTION: And Use In Chronic-Degenerative Diseases

FILE REPERBORS: P10205449-3

CURRENT APPLICATION NUMBER: BR P10205449-3

FRIOR APPLICATION NUMBER: BR P10205449-3

FRIOR FILING DATE: 2003-12-09

FRIOR FILING DATE: 2002-12-09

NUMBER OF SEQ ID NOS: 594
